# World Landforms - Improved Hammond Method 2015

- High Hills
- Low Mountains
- High Mountains
- Moderate Hills
- Scattered Moderate Hills
- Scattered High Hills
- Scattered Low Mountains
- Scattered High Mountains
- Irregular Plains with Low Hills
- Irregular Plains with Moderate Relief
- Tablelands with Moderate Relief
- Tablelands with Considerable Relief
- Tablelands with High Relief
- Tablelands with Very High Relief
- Flat or Nearly Flat Plains
- Smooth Plains with some local relief
- Surface Water

**Why do we need a Global Landform Map?**

**Characterize and Define Ecosystems**

# Update Global ELU Map

## Background

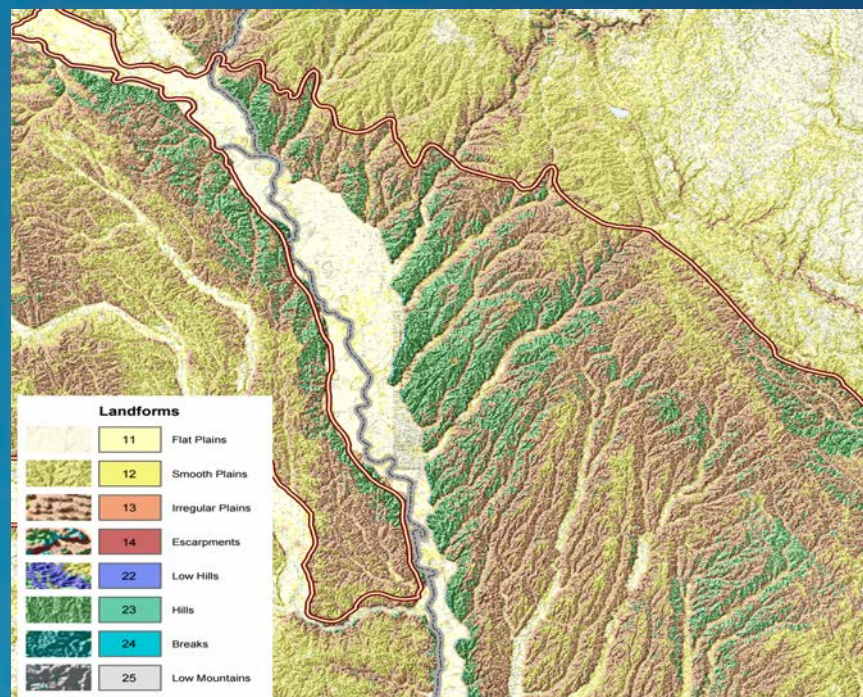

*Classes of land surface form in the forty-eight States, USA, Hammond (1964)*

- 1900-1954 based on genetic geomorphology
- Regional Based (Hammond, 1954)
- Slope + Local Relief + Profile

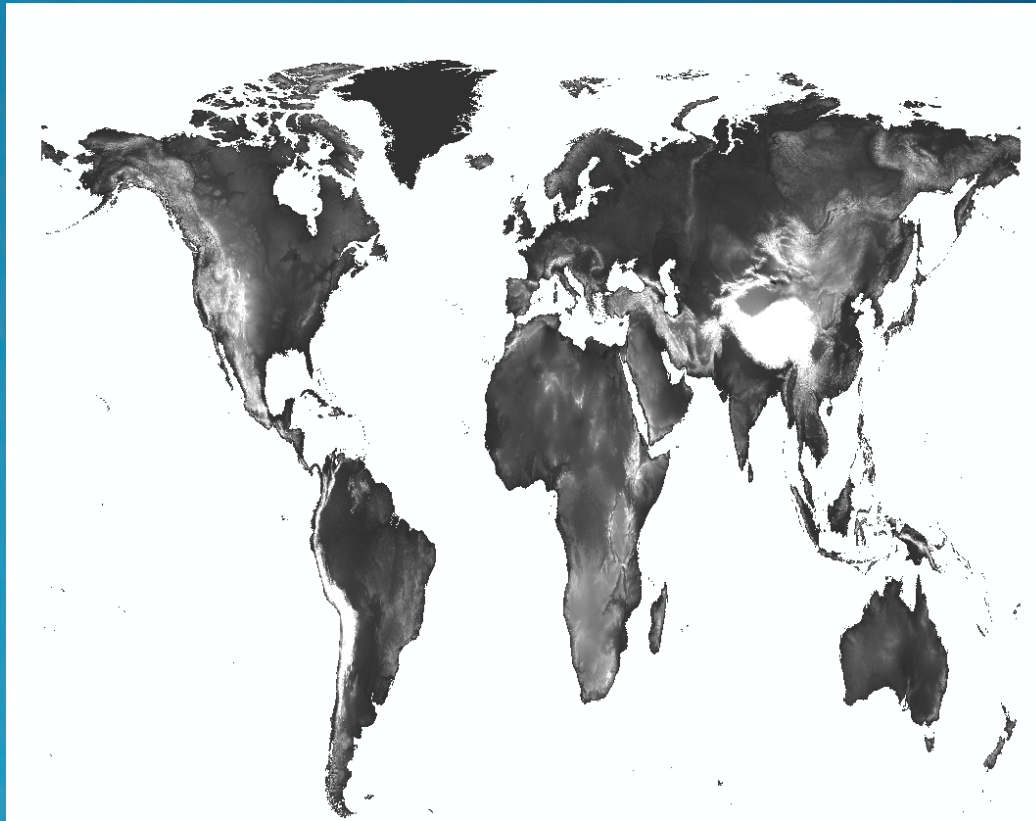

## Automating Hammond's Classification in GIS

- Dikau et al., 1991, New Mexico
- Brabyn 1998, New Zealand
- True 2002, Midwest, US
- Gallant et al., 2005, Alaska
- Morgan and Lesh 2005, Maryland

30-meter Midwest Landform Classes,  
True, MoRAP (2002)

## GMTED 2010 / 250-meter

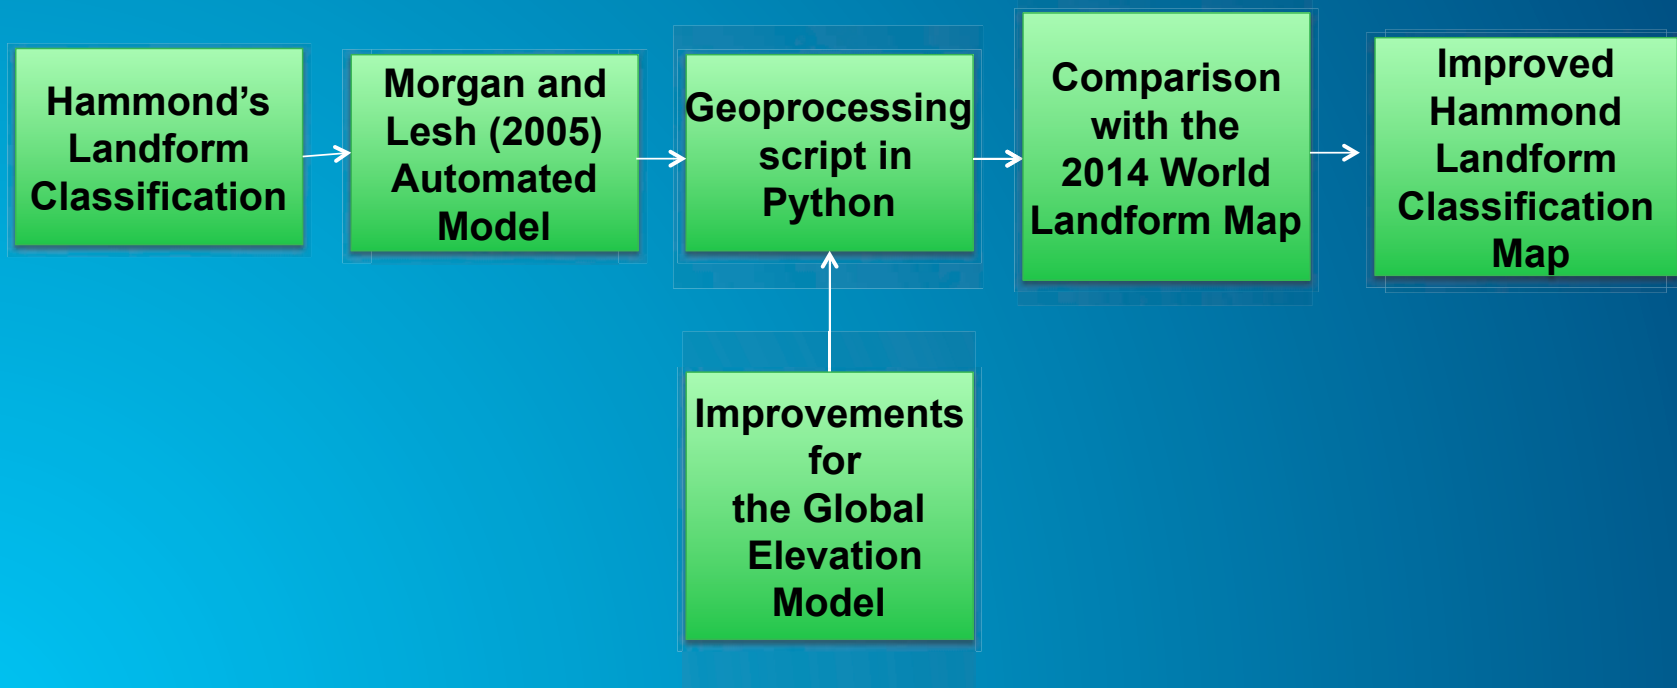

## World Landforms MoRAP Method-2014

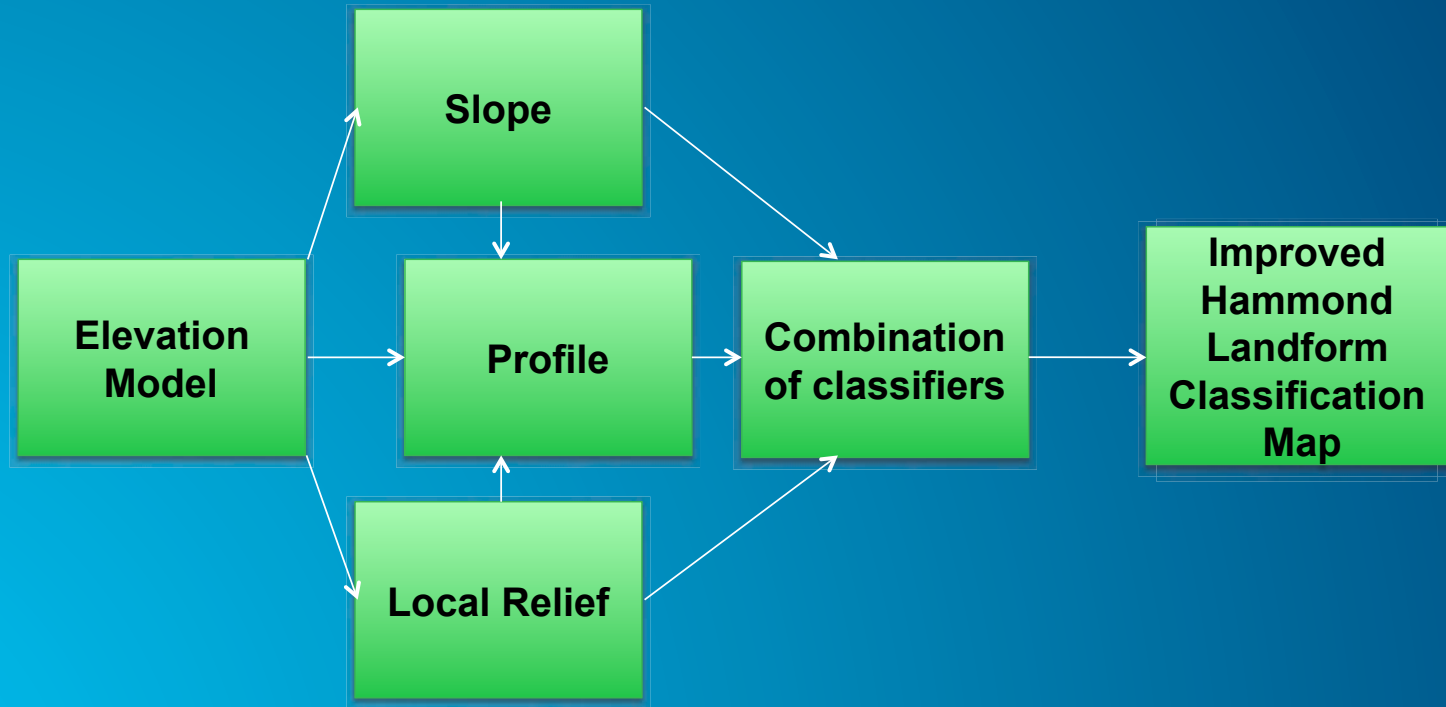

- **Missing Major Landform Class**
- **Too Many Plains Cells**
- **Faceted or Fragmented**

## Conceptual Methodology

## Conceptual Summary

## Gentle Slope

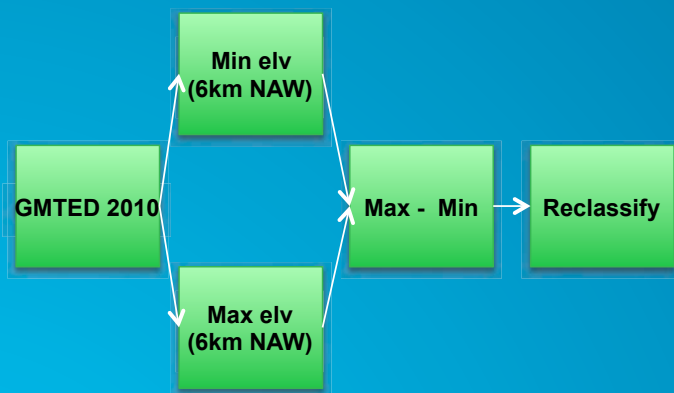

Amount of gentle slope within the 3-km window

Percent of Neighborhood Over 8% Slope	Gentle Slope Class Code
0 - 20%	400
21% - 50%	300
51% - 80%	200
>81%	100

## Local Relief

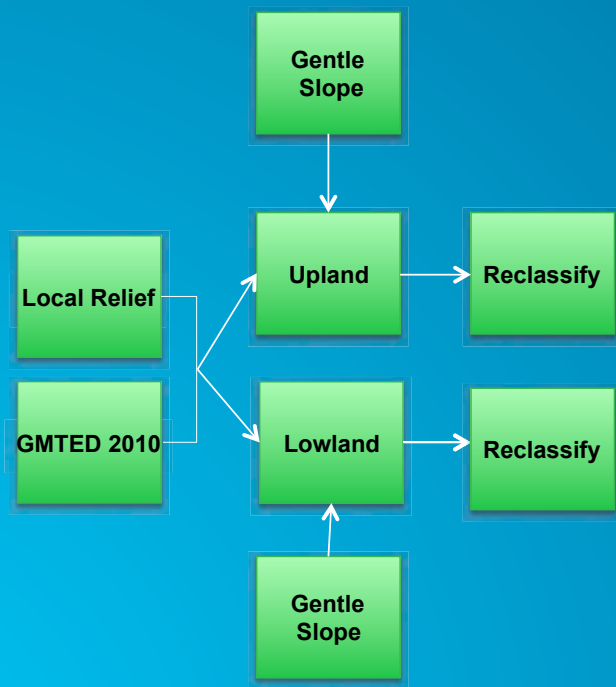

Amount of elevation change within a circular 6-km window

Change in Elevation	Relief Class Code
0 – 30 meter	10
>30m to 90m	20
>90m to 150m	30
>150m to 300m	40
>300m to 900m	50
>900m	60

# Profile

Amount of gentle slope in uplands and lowlands within the 6-km window

Percent of gentle slope within the uplands and lowlands	Profile Class Code
Less than 50% gentle slope is in upland or lowland	0
More than 75% of gentle slope is in lowland	1
50%-75% of gentle slope is in lowland	2
50-75% of gentle slope is in upland	3
More than 75% of gentle slope is in upland	4

## Data Filtering - Resampling

# Plains

Original Landform Classes  
from Sayre et al., 2014)

Improved Hammond's  
Landform Classes

- |                             |               |                          |                                       |
|-----------------------------|---------------|--------------------------|---------------------------------------|
| Breaks/Foothills            | Low Hills     | High Hills               | Scattered High Mountains              |
| Flat Plains                 | Low Mountains | Low Mountains            | Irregular Plains with Low Hills       |
| High Mountains/Deep Canyons | Smooth Plains | High Mountains           | Irregular Plains with Moderate Relief |
| Hills                       |               | Moderate Hills           | Tablelands with Moderate Relief       |
|                             |               | Scattered Moderate Hills | Tablelands with Considerable Relief   |
|                             |               | Scattered High Hills     | Tablelands with High Relief           |
|                             |               | Scattered Low Mountains  | Tablelands with Very High Relief      |
|                             |               |                          | Flat or Nearly Flat Plains            |
|                             |               |                          | Smooth Plains with some local relief  |

## Result

- 16 landform classes, including tablelands
- Intuitive empirical expression of regional landform classes
- To our knowledge, this is the first successful automated global implementation of Hammond's landform classification.
- Better results than earlier works.
