

IDES GIS Workshop Day 4

Professor Dawn Wright

Grad Assistant Lalo Guerrero

Object/Vector Feature Types

<u>Feature Type</u>	<u>Single Part</u>	<u>Multi-Part</u>
---------------------	--------------------	-------------------

Point

Line

Area

Annotation

Raster or Grid Data Structure.

Object/Vector Feature Types

Feature Type Single Part Multi-Part

Point

Line

Area

Annotation

“Rasters tell WHAT occurs everywhere.”

- ⊕ natural for scanned or remotely sensed data.
- ⊕ **continuous surfaces** (e.g., topography)
- ⊕ spatial analytical operations are faster.
- ⊕ compression is easier

Raster

Orange County, CA

Vector

Projected with flat ground plane

Projected with tessellated ground plane

Orange County Street Centerlines

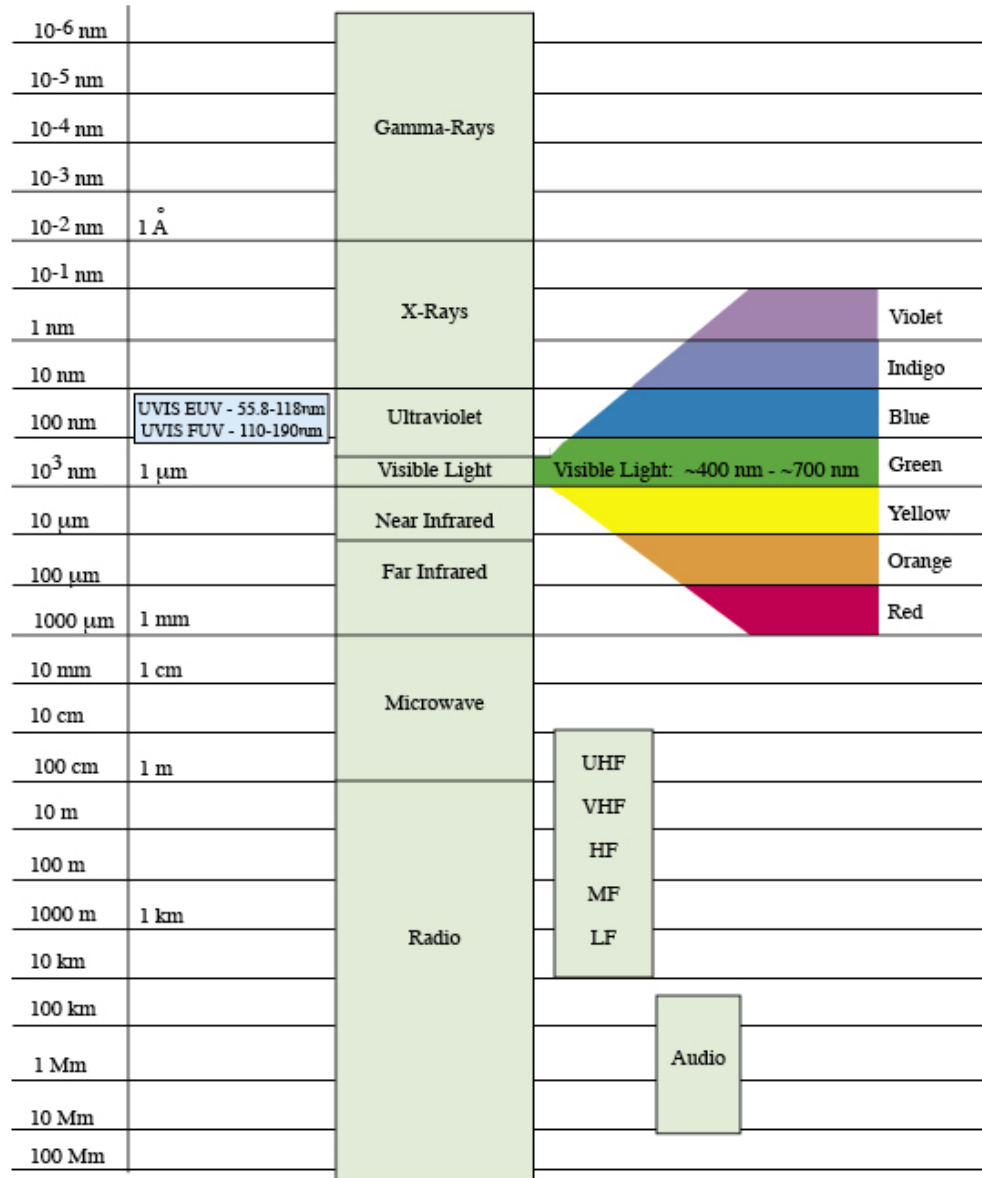

National Polar-orbiting Operational Environment Satellite System (NPOESS), a next-generation platform for weather and climate.

The Electromagnetic Spectrum

Chart by LRSP/University of Colorado, Boulder

nm=nanometer, Å=angstrom, μm=micrometer, mm=millimeter,
cm=centimeter, m=meter, km=kilometer, Mm=Megameter

Components of a passive remote sensing system

Example with infrared or microwave wavelengths

Two types of
remote sensing:

Passive

LandSat is an example of a passive remote sensing system (spaceborne satellite)

Old MSS –
Multispectral
Scanner

Current ETM –
Enhanced
Thematic Mapper

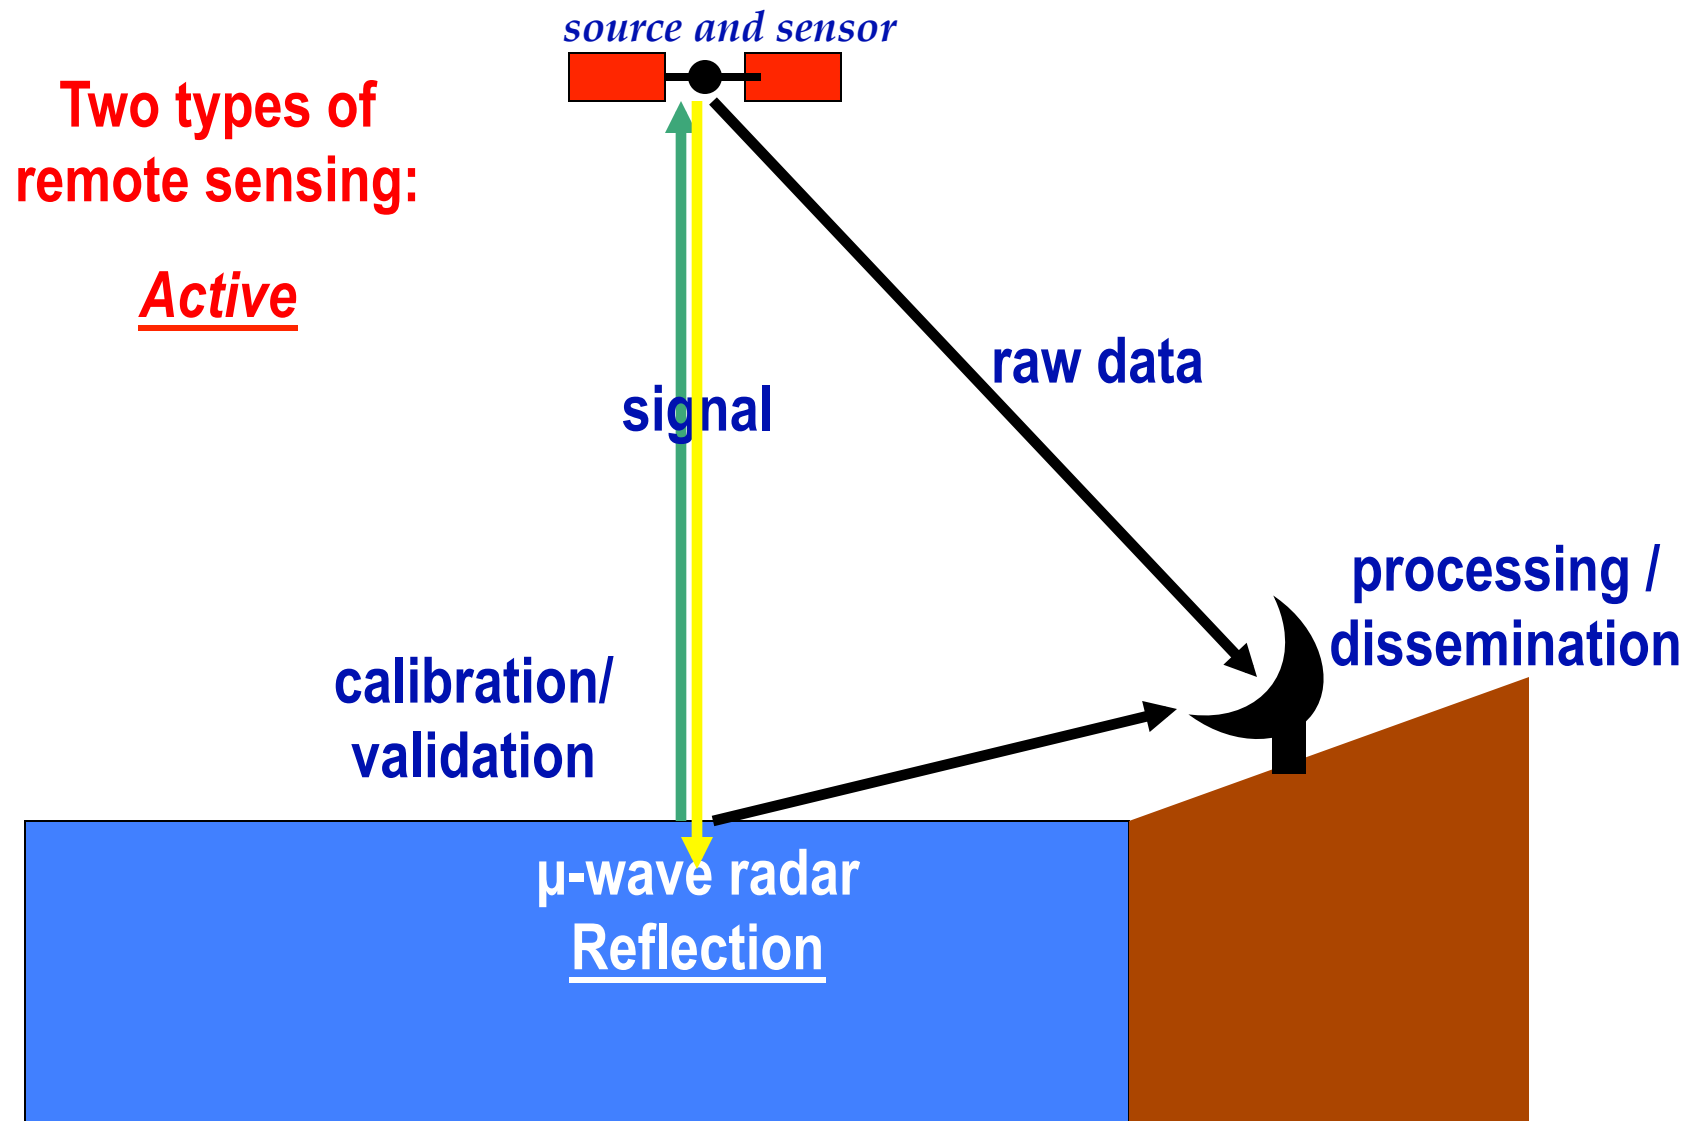

Image provided by USGS

	Bare Land		Low Intensity Developed
	Cultivated Land		Mixed Forest
	Deciduous Forest		Palustrine Emergent Wetland
	Estuarine Emergent Wetland		Palustrine Forested Wetland
	Evergreen Forest		Unconsolidated Shore
	Grassland		Water
	High Intensity Developed		No Data

Components of an active remote sensing system

Transmit at nadir (directly beneath satellite)

LIDAR is an example of an active remote sensing system (airborne)
