

**Assessment of the  
Potential for Conflict  
between Existing Ocean  
Space Use and  
Renewable Energy  
Development off the  
Coast of Oregon**

Colleen  
Sullivan

MS Thesis  
Defense

June 5 2012

# ACKNOWLEDGEMENTS

- Dan Hudgens and the team at IEC
- Tanya Haddad, Andy Lanier, Jason Busch, and the many other patient folks with ocean space use data
- Committee
  - Dawn Wright
  - Flaxen Conway
  - Julia Jones
  - Yvette Spitz
- Family, Friends, OSU Community

# OUTLINE

- Background
- Methods
- Results
- Discussion
- Conclusion

[oregonwave.org](http://oregonwave.org)

# ECOSYSTEM BASED MANAGEMENT (EBM)

- A framework that requires analysis of connections among components of the marine ecosystem
  - Requires collaboration among participants
  - Has as a goal achievement of multiple objectives
- A move away from single-sector management

# MARINE SPATIAL PLANNING (MSP)

- One of many tools under the umbrella of EBM
  - Space-oriented decision making tool to efficiently identify stakeholders, conduct outreach, and mitigate conflict
  - Considers the spatial arrangement of ecologic, economic, and social needs met by ocean space use
  - Identifies compatible uses and where they are located
- Zoning in the last frontier...
- Stakeholder research during MSP is critical to conflict mitigation

# REGULATORY FRAMEWORK FOR OFFSHORE ENERGY DEVELOPMENT

- 2005: Energy Policy Act
- 2009: Interagency Ocean Policy Task Force
  - Jul 2010: Obama signs executive order: “Stewardship of the Ocean, Our Coasts, and the Great Lakes”
    - Focus is on EBM, MSP
    - Responsible mitigation of conflict
- Bureau of Ocean Energy Management
  - Responsible decisions especially important because of increased scrutiny
- Regional and state planning also currently embrace EBM

*images from boemre.gov*

# ENVIRONMENTAL CONFLICT MANAGEMENT

- EBM for conflict management requires:
  - Achievement of multiple objectives
    - Compatible uses
  - Explicit decisions as to trade-offs
- Two categories of ocean space use: (Sørensen et al. 2003)
  - Where existing regulations restrict access (and conflict)
    - Shipping routes, military grounds, marine protected areas
    - Compatibility with development straightforward...
  - Conflicting use occurs
    - Fishing grounds, cultural areas
    - Compatibility with development unclear...

# RESEARCH QUESTION

- **Goal:** Create a visualization of the potential for conflict, using spatial data in a GIS
- **Hypothesis:** There are many categories of overlapping ocean space use such that using model results can help managers to pinpoint the key stakeholders in an area and to target areas for development where fewer use groups are present

## Study Area and Jurisdictional Boundaries of the U.S.

-  U.S. Outer Continental Shelf (12-200m or further)
-  U.S. Exclusive Economic Zone (12-200 nm)
-  U.S. Contiguous Zone (12-24 nm)
-  U.S. Territorial Sea (0-12 nm)
-  State Waters (0-3 nm)
-  Study Area

Coordinate System:  
GCS North American 1983  
Datum:  
North American 1983

# OCEAN SPACE USE DATA COLLECTION

- Federal, State, and nongovernmental GIS data clearinghouses
- Internet searches for spatial data (e.g., coordinates of dive sites, shipwrecks, etc.) to create shapefiles
- Metadata
  - Email conversations with 60 individuals to get it up to FGDC standards
- Access database to track shapefiles

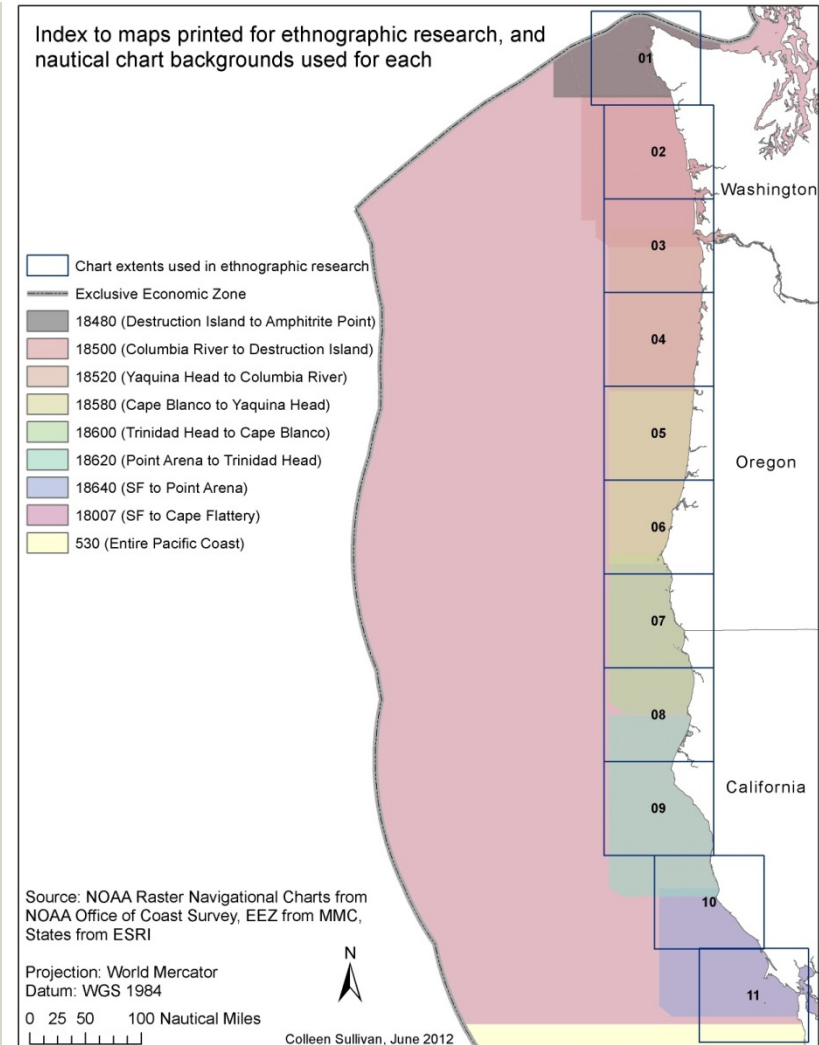

## Data Sources:

BOEM/NOAA, California Department of Fish and Game, Coast Guard, Dr. Flaxen Conway and Dr. Carrie Pomeroy's Interviews, Marine Map, MPA.gov, National Atlas, NOAA ENCDirect, NOAA NMFS, NOAA NWFSC, Oregon Coastal Atlas, Oregon Department of Fish and Wildlife (ODFW), Oregon Department of Land Conservation and Development (OR LCD), Oregon Geospatial Enterprise Office (GEO), Oregon SeaGrant, Pacific Coast Marine Habitat Program, PaCOOS, PSMFC/PacFIN, The Nature Conservancy, US Army Corps of Engineers, US Navy

# ETHNOGRAPHIC RESEARCH

- Dr. Flaxen Conway (OR Sea Grant)
- Dr. Carrie Pomeroy (CA Sea Grant)
- Commercial fishing (harvesting, processing, Native American, aquaculture)
- Commercial non-fishing (shipping, tug, service and safety)
- Non-commercial (recreational fishing and boating, scientific)

# DATA CLEAN-UP AND INPUT PREPARATION

- 488 data layers in WA, OR, CA from 32 sources
- Re-examined data with coverage in OR
  - Result: 127 shapefiles in 26 categories
- Python code to create category rasters
  - 1 nm<sup>2</sup> grid

Wing IDE: Default Project: PrepRasters.py (z:\MMS\Sullivan\Thesis\Analysis\Python)

```
TheList=os.listdir(TopLevelFolder+"Input/")
for TheFolder in TheList:

    # Create a temporary folder to store intermediate files,
    # the folder will be deleted as the final step of the loop
    TempScratchFolder = TopLevelFolder + "BatchShpToRasTemp/"
    os.makedirs(TempScratchFolder)

    # Create a subfolder in 'Clipped' for this category to
    # store the clipped files
    ClippedPath = TopLevelFolder+"Clipped/"+TheFolder+"/"
    os.makedirs(ClippedPath)

    # Set the processing path
    ProcessingPath = TopLevelFolder+"Input/"+TheFolder+"/"

    TheTextFile.write("Now processing shapefiles in path:" + ProcessingPath + "\n")
    print("Now processing shapefiles in path:" + ProcessingPath + "\n")

    TheProcessingList=os.listdir(ProcessingPath)
    for TheFile in TheProcessingList:

        # The file name is split from its extension for use in
        # the commands that follow and to determine if it is a
        # .shp, each shapefile name appears multiple times in
        # the list because of its component files, so this
        # ensures each shapefile is only actually processed
        # once.
        TheFileName, TheFileExtension = os.path.splitext(TheFile)
```

# CONFLICT ANALYSIS MODEL: INPUTS

<i>Conflict Rank</i>	<i>Activity is present and...</i>	<i>Data category</i>	<i>Weight</i>
1	Poses little potential for conflict, possibly even compatible with renewable energy development	Wrecks	4
2	Poses some potential for conflict that could probably be mediated	Habitat	1
3	Poses likely potential for conflict requiring in-depth negotiation that could be successful depending on location targeted	MMA, MPA, MR, WR	4
4	Poses nearly insurmountable potential for conflict	Native American	3
		Research - Sampling location	4
		Military	4
		Disposal/Dump	4
		Dredge	2
		Cable	4
		Pipeline	4
		Recreational - Boating	1
		Recreational - Fishing	3
		Recreational - Wildlife Viewing	2
		Recreational - Other (e.g. surfing)	2
		Marine Transportation - High Intensity	4
		Marine Transportation - Moderate Intensity	3
		Marine Transportation - Low to Moderate Intensity	2
		Marine Transportation - Low Intensity	1
		Marine Transportation - Navigation Aid	2
		Fishing - Closure Areas	4
		Fishing - Other Gear Types	3
		Fishing - Line	4
		Fishing - Pots	3
		Fishing - Trap	3
		Fishing - Trawls	3
		Fishing - Trolling	3

- Ranking based on user's perception of its compatibility or lack thereof with development
- Output will then show an ordinal scale of potential for conflict

## Potential for Conflict

- Folder containing category rasters

- Name for output folder and raster (No more than 13 characters, if folder already exists it will be deleted!)

- Folder in which to create output folder

Pipeline

Recreational Boating

Recreational Fishing

## Potential for Conflict

This tool will take user inputs for weights that represent the potential for conflict between a category of ocean space use and installation of a renewable energy project, it will weight each category as specified, and add together the weighted categories to derive a raster which displays the relative potential for conflict.

# OREGON WAVE ENERGY TRUST – DEVELOPMENT FEASIBILITY DATA

- Technical and economic feasibility
- Provided to DLCD in hopes of consideration in the TSP update

# ZONAL STATISTICS

## Coastline converter and coastal surge devices

	Area (mi <sup>2</sup> )	Min	Max	Mean	St. Dev.
Top 6%	10.8	22	51	32.1	5.3
Top 12%	10.6	22	41	30.6	4.1
Top 21%	14.9	18	41	31.0	4.8
Top 38%	38.9	18	45	29.1	5.5
All Other Values (>0)	97.5	18	44	28.8	4.8

## Mid-depth devices

	Area (mi <sup>2</sup> )	Min	Max	Mean	St. Dev.
Top 6%	81.3	18	51	31.2	5.0
Top 11%	79.6	18	51	30.7	5.6
Top 20%	125.2	18	51	30.2	5.4
Top 41%	356.9	18	43	30.6	4.9
All Other Values (>0)	1479.5	18	47	31.6	4.6

## Deep water devices

	Area (mi <sup>2</sup> )	Min	Max	Mean	St. Dev.
Top 5%	108.9	23	43	33.5	4.6
Top 11%	143.9	20	51	32.9	4.3
Top 20%	186.1	19	47	32.3	4.6
Top 41%	490.1	18	51	31.7	4.5
All Other Values (>0)	1706.1	18	47	31.7	4.1

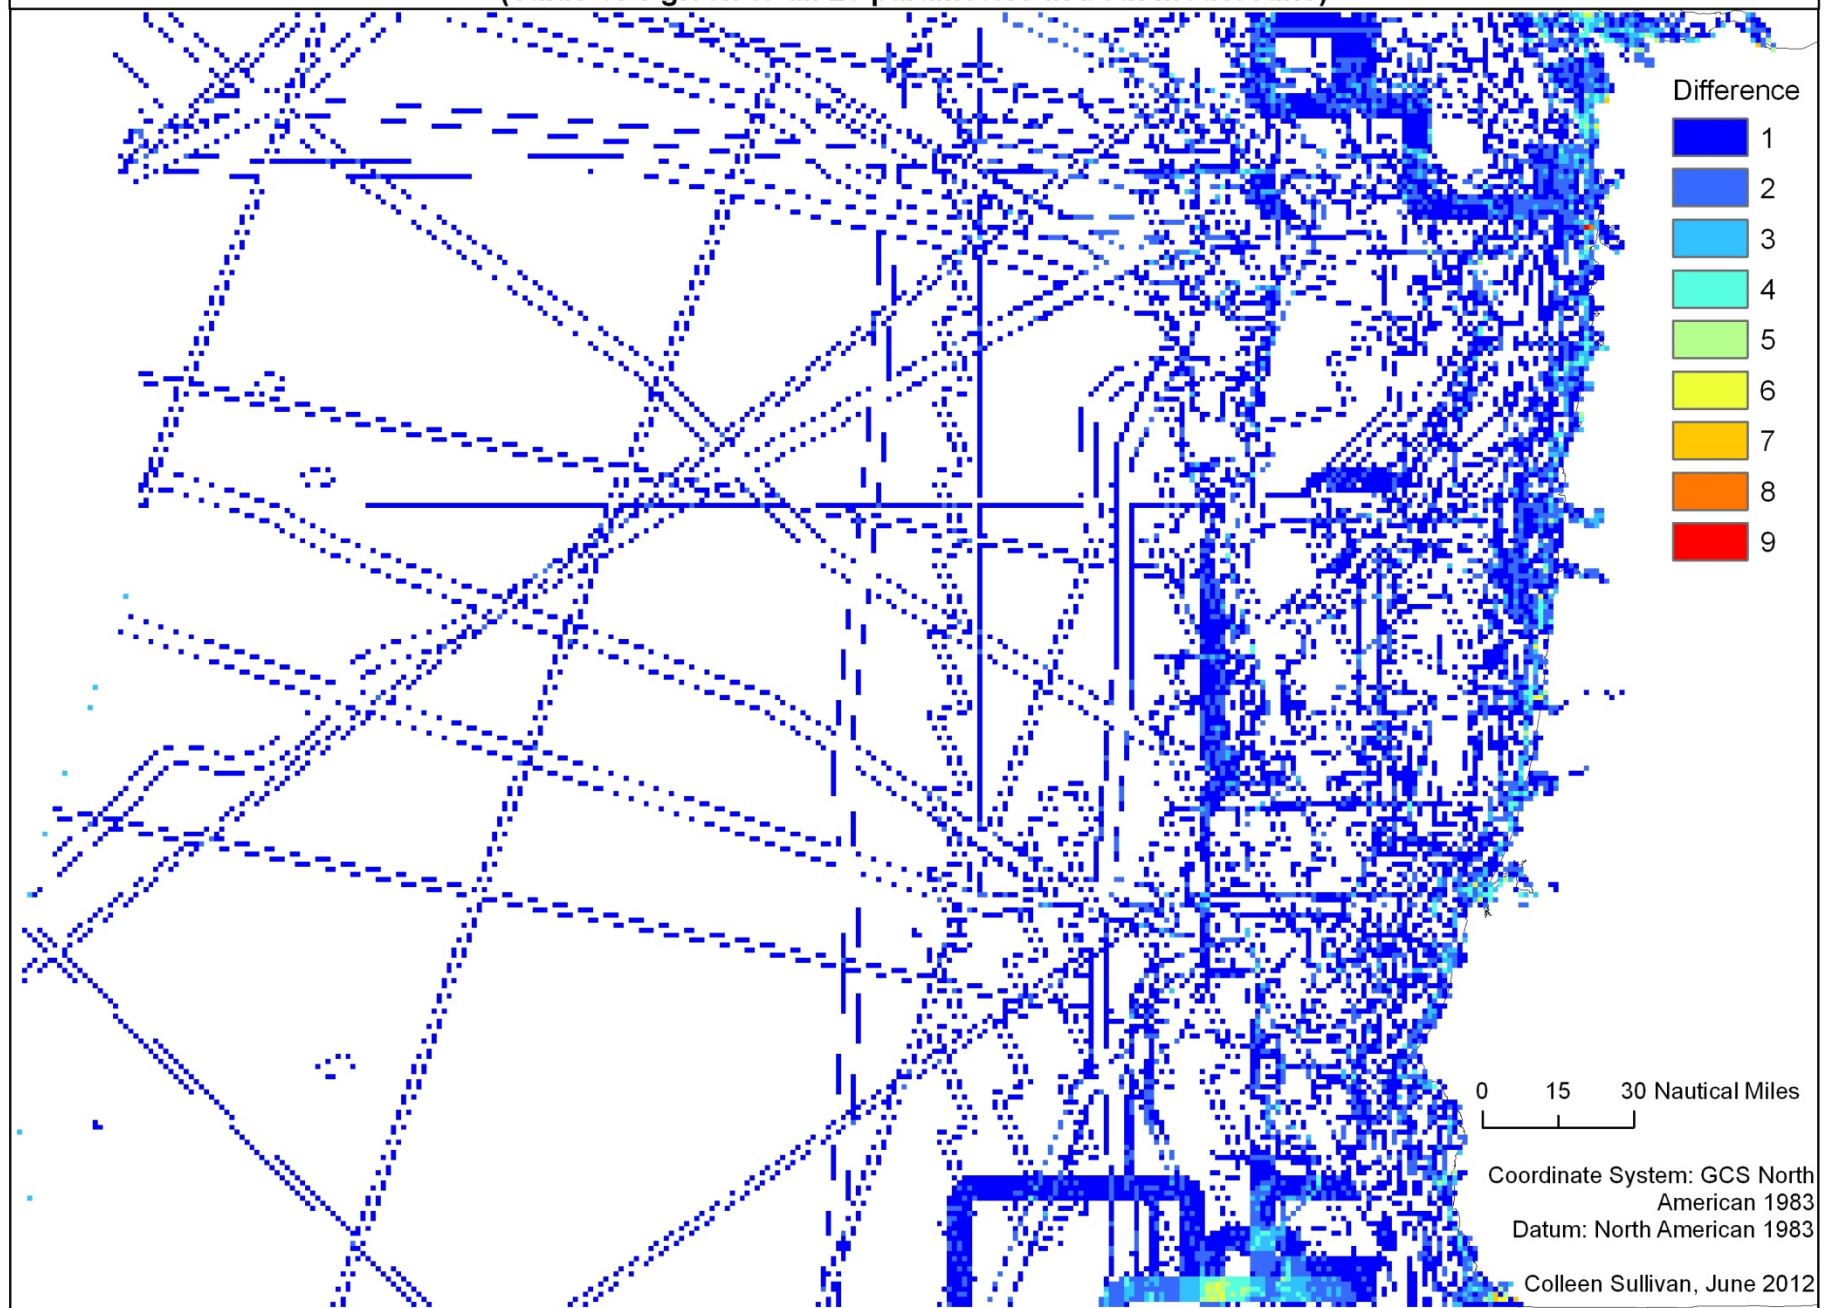

# UNCERTAINTY

- All maps contain uncertainty
- Important for decision-makers to understand its sources and implications
  - Improve credibility
- Created a visualization of uncertainty to convey what is known about the data quality and guard against inappropriate applications
- Ideally: calculate positional accuracy
- Proxy: clues in the metadata
  - 42 of the 127 shapefiles had concrete clues as to horizontal accuracy
  - BUT only the logbook data resulted in a buffer distance  $> .5$  nm
- Python code to buffer the input shapefiles, re-do the input category rasters

Representation of uncertainty: Buffered Model Result - Standard Model Result  
(Value of 1 given to all 26 parameters in both model runs)

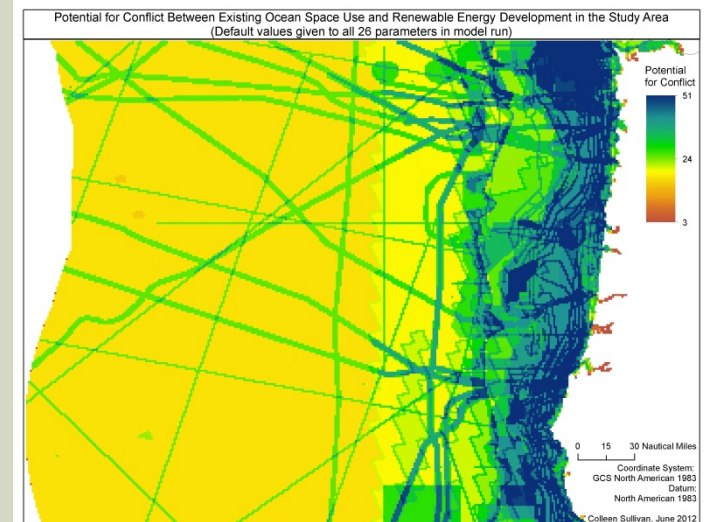

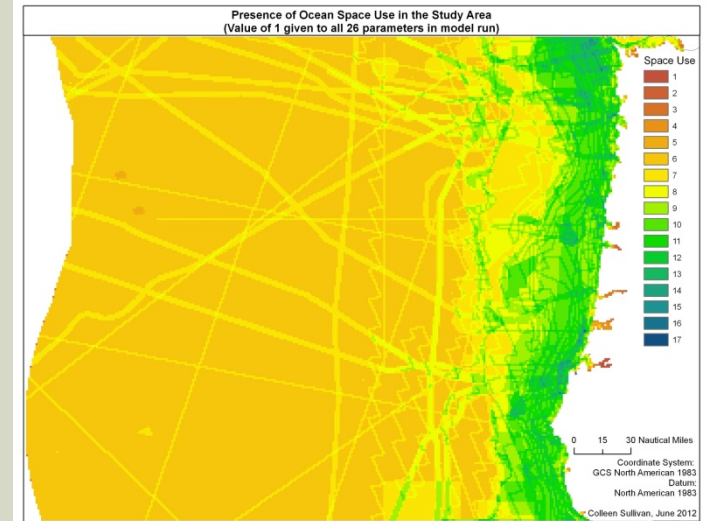

Representation of uncertainty: Buffered Model Result - Standard Model Result  
(Value of 1 given to all 26 parameters in both model runs)

# DISCUSSION

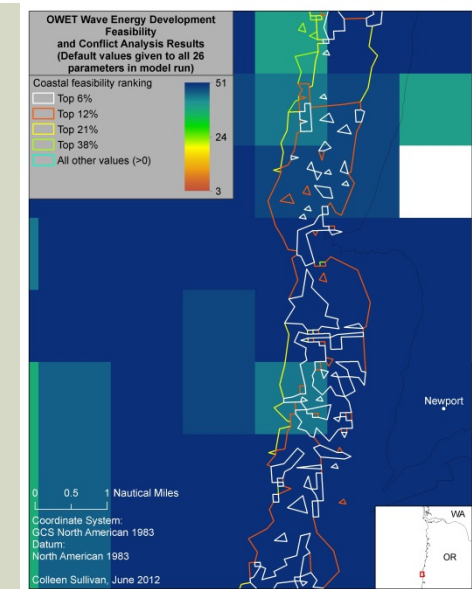

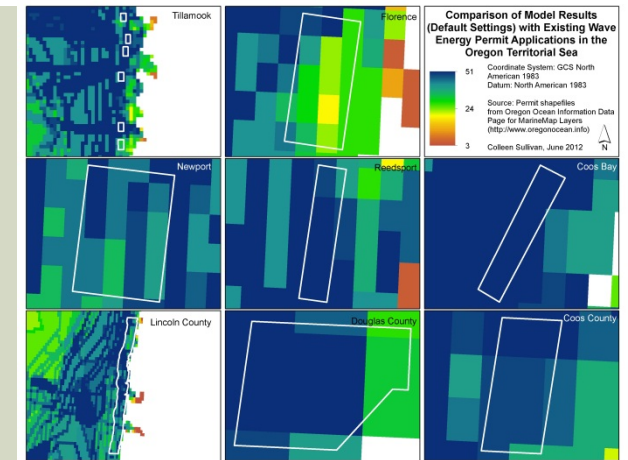

- Results demonstrate the extent of overlap among ocean space use categories
  - 17 in a nm<sup>2</sup> cell
  - Most have at least 6
- Concentrated between coast and 30 nm at sea

# DISCUSSION

- Comparison to permit sites showed relative potential for conflict and stakeholders present
- Comparison to wave energy development feasibility showed key parallels
  - Direct relationship between suitability and conflict
    - Similar criteria
      - 20 nm of a deepwater port
      - Seafloor type: sand and mud
- Caveats to results
  - Snapshot in time
  - Uncertainty of input data
  - Coastal communities

# CONCLUSION

- Mitigation of conflict between development and existing space use is not merely a best practice supported by current policy, but a necessity
- Shows contentious areas and input data quickly shows which stakeholder categories are present
  - Initial research and outreach
- Model can help interested parties understand one another and the big picture
- Can assist EBM
  - Can be adapted to other regions and scales

*"The ocean is huge, but how huge it feels depends on how concentrated any resource is" (Conway 2012, 49).*
